Aim: Practical based on Signal Processing using Scipy

IDE:

What is SciPy?

SciPy is a free and open-source Python library used for scientific computing and technical computing. It is a collection of mathematical algorithms and convenience functions built on the NumPy extension of Python. It adds significant power to the interactive Python session by providing the user with high-level commands and classes for manipulating and visualizing data. As mentioned earlier, SciPy builds on NumPy and therefore if you import SciPy, there is no need to import NumPy.

Generates a sine wave and a square wave with a frequency of 5 Hz and a sampling frequency of 500 Hz.

```
import numpy as np
```

```
import matplotlib.pyplot as plt
```

```
from scipy import signal
```

```
# Parameters
```

```
fs = 500 # Sampling frequency
```

```
f = 5 # Frequency of the signal
```

```
t = np.linspace(0, 1, fs, endpoint=False) # Time array
```

```
# Create a sine wave signal
```

```
sine_wave = np.sin(2 * np.pi * f * t)
```

```
# Create a square wave signal using scipy
```

```
square_wave = signal.square(2 * np.pi * f * t)
```

```
# Plot the signals
```

```
plt.figure(figsize=(10, 5))
```

```
plt.subplot(2, 1, 1)
```

 Marwadi University Marwadi Chandarana Group 	Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology	
Subject: Programming With Python (01CT1309)	Aim: Practical based on Signal Processing using Scipy	
Experiment No: 12	Date:	Enrollment No:92510133025

```
plt.plot(t, sine_wave)

plt.title('Sine Wave')

plt.xlabel('Time [s]')

plt.ylabel('Amplitude')

plt.subplot(2, 1, 2)

plt.plot(t, square_wave)

plt.title('Square Wave')

plt.xlabel('Time [s]')

plt.ylabel('Amplitude')

plt.tight_layout()

plt.show()
```

Triangular and Ramp signal

Parameters

fs = 500 # Sampling frequency

t = np.linspace(-1, 1, fs, endpoint=False) # Time array

1. Unit Step Signal

unit_step = np.heaviside(t, 1)

2. Unit Impulse Signal (Dirac Delta)

unit_impulse = np.zeros_like(t)

unit_impulse[fs//2] = 1 # Impulse at t=0

3. Ramp Signal

ramp_signal = signal.sawtooth(2 * np.pi * t, 1)

4. Sine Wave

f_sine = 5 # Frequency of the sine wave

sine_wave = np.sin(2 * np.pi * f_sine * t)

5. Cosine Wave

f_cosine = 5 # Frequency of the cosine wave

cosine_wave = np.cos(2 * np.pi * f_cosine * t)

6. Exponential Signal

exponential_signal = np.exp(t)

7. Triangular Wave

triangular_wave = signal.sawtooth(2 * np.pi * 5 * t, 0.5)

8. Square Wave

square_wave = signal.square(2 * np.pi * 5 * t)

```

```
plt.xlabel('n (Discrete Time)')
```

```
plt.ylabel('Amplitude')
```

```
plt.tight_layout()
```

```
plt.show()
```

Post Lab Exercise:

- Generate two sine wave signals with frequencies of 5 Hz and 10 Hz, both sampled at 1000 Hz for 1 second. Add the two signals together and plot the result.

 Marwadi University Marwadi Chandarana Group 	Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology	
Subject: Programming With Python (01CT1309)	Aim: Practical based on Signal Processing using Scipy	
Experiment No: 12	Date:	Enrollment No:92510133025

CODE:

```
import numpy as np
```

```
import matplotlib.pyplot as plt
```

```
# Parameters
```

```
fs = 1000 # Sampling frequency
```

```
t = np.arange(0, 1, 1/fs) # Time vector for 1 second
```

```
# Sine waves
```

```
sine_5hz = np.sin(2 * np.pi * 5 * t)
```

```
sine_10hz = np.sin(2 * np.pi * 10 * t)
```

```
# Sum of sine waves
```

```
sum_sine = sine_5hz + sine_10hz
```

```
# Plotting
```

```
plt.figure()
```

```
plt.plot(t, sum_sine)
```

```
plt.title('Sum of 5 Hz and 10 Hz Sine Waves')
```

```
plt.xlabel('Time [s]')
```

```
plt.ylabel('Amplitude')
```

```
plt.grid(True)
```

```
plt.show()
```

OUTPUT:

Subject: Programming With Python (01CT1309)

Aim: Practical based on Signal Processing using Scipy

Experiment No: 12

Date:

Enrollment No:92510133025

- b. Generate a 5 Hz sine wave and a 10 Hz cosine wave, both sampled at 500 Hz for 2 seconds. Multiply the two signals element-wise and plot the resulting signal.

CODE:

Parameters

fs = 500 # Sampling frequency

t = np.arange(0, 2, 1/fs) # Time vector for 2 seconds

Sine and Cosine waves

sine_5hz = np.sin(2 * np.pi * 5 * t)

cosine_10hz = np.cos(2 * np.pi * 10 * t)

Element-wise multiplication

product = sine_5hz * cosine_10hz

Plotting

 Marwadi University Marwadi Chandarana Group 	Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology	
Subject: Programming With Python (01CT1309)	Aim: Practical based on Signal Processing using Scipy	
Experiment No: 12	Date:	Enrollment No:92510133025

```
plt.figure()
plt.plot(t, product)
plt.title('Product of 5 Hz Sine Wave and 10 Hz Cosine Wave')
plt.xlabel('Time [s]')
plt.ylabel('Amplitude')
plt.grid(True)
plt.show()
```

OUTPUT:

- c. Generate a 5 Hz sine wave signal and shift it in time by 0.1 seconds. Plot the original and shifted signals on the same graph for comparison.

CODE:

Parameters

fs = 1000 # Sampling frequency

t = np.arange(0, 1, 1/fs) # Time vector for 1 second

 Marwadi University Marwadi Chandarana Group 	Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology	
Subject: Programming With Python (01CT1309)	Aim: Practical based on Signal Processing using Scipy	
Experiment No: 12	Date:	Enrollment No:92510133025

Sine wave

```
sine_5hz = np.sin(2 * np.pi * 5 * t)
```

Time shift

shift = 0.1 # Shift by 0.1 seconds

```
sine_shifted = np.sin(2 * np.pi * 5 * (t - shift))
```

Plotting

```
plt.figure()
```

```
plt.plot(t, sine_5hz, label='Original')
```

```
plt.plot(t, sine_shifted, label='Shifted by 0.1s', linestyle='--')
```

```
plt.title('Original and Time-Shifted 5 Hz Sine Wave')
```

```
plt.xlabel('Time [s]')
```

```
plt.ylabel('Amplitude')
```

```
plt.legend()
```

```
plt.grid(True)
```

```
plt.show()
```

OUTPUT:
