Subject: Programming With Python (01CT1309)	Aim: Practical based on Data Loading, Storage and File Formats	
Experiment No: 22	Date:	Enrollment No: 92510133025

Aim: Practical based on Data Loading, Storage and File Formats

IDE:

load, manipulate, and store data using Python (over reading and writing CSV, JSON, and Excel files)

Library Installation

pip install pandas openpyxl

Sample Data:

Create a folder for this experiment and add the following sample data files:

sample_data.csv (Name, Age, City

Alice, 30, New York

Bob, 25, Los Angeles

Charlie, 35, Chicago)

sample_data.json ([

{"Name": "David", "Age": 28, "City": "San Francisco"},

{"Name": "Eve", "Age": 22, "City": "Seattle"}]

)

sample_data.xlsx (you can create this using Excel with similar data)\

Loading Data from CSV

Read the CSV file and perform basic data manipulation.

import pandas as pd

Load data from CSV

 Marwadi University Marwadi Chandarana Group 	Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology	
Subject: Programming With Python (01CT1309)	Aim: Practical based on Data Loading, Storage and File Formats	
Experiment No: 22	Date:	Enrollment No: 92510133025

```
csv_file_path = 'sample_data.csv'
```

```
df_csv = pd.read_csv(csv_file_path)
```

```
# Display the DataFrame
```

```
print("CSV Data:")
```

```
print(df_csv)
```

```
# Basic data manipulation: Filter by age
```

```
filtered_data = df_csv[df_csv['Age'] > 30]
```

```
print("\nFiltered Data (Age > 30):")
```

```
print(filtered_data)
```

Output:

```
CSV Data:
   Name  Age  City
0  Alice  30  New York
1   Bob   25 Los Angeles
2 Charlie  35   Chicago

Filtered Data (Age > 30):
   Name  Age  City
2 Charlie  35  Chicago
```

Loading Data from JSON

Read the JSON file and manipulate the data.

```
# Load data from JSON
```

 Marwadi University Marwadi Chandarana Group 	Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology	
Subject: Programming With Python (01CT1309)	Aim: Practical based on Data Loading, Storage and File Formats	
Experiment No: 22	Date:	Enrollment No: 92510133025

```
json_file_path = 'sample_data.json'
```

```
df_json = pd.read_json(json_file_path)
```

```
# Display the DataFrame
```

```
print("\nJSON Data:")
```

```
print(df_json)
```

```
# Basic data manipulation: Find the average age
```

```
average_age = df_json['Age'].mean()
```

```
print("\nAverage Age:", average_age)
```

Output:

```
JSON Data:
   Name  Age  City
0 David   28  San Francisco
1  Eve   22   Seattle

Average Age: 25.0
```

Loading Data from Excel

Read the Excel file and display its contents.

```
# Load data from Excel
```

```
excel_file_path = 'sample_data.xlsx'
```

```
df_excel = pd.read_excel(excel_file_path)
```

 Marwadi University Marwadi Chandarana Group 	Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology	
Subject: Programming With Python (01CT1309)	Aim: Practical based on Data Loading, Storage and File Formats	
Experiment No: 22	Date:	Enrollment No: 92510133025

Display the DataFrame

```
print("\nExcel Data:")
```

```
print(df_excel)
```

Basic data manipulation: Count the number of entries

```
entry_count = df_excel.shape[0]
```

```
print("\nNumber of entries in Excel file:", entry_count)
```

Output:

```
Excel Data:
   Name  Age  City
0  Alice  30  New York
1   Bob   25  Los Angeles
2 Charlie  35   Chicago
3  David  28  San Francisco
4   Eve   22   Seattle
```

Writing Data to Different Formats

Save manipulated DataFrames to new files in different formats.

Save filtered CSV data to a new file

```
filtered_data.to_csv('filtered_data.csv', index=False)
```

```
print("\nFiltered data saved to 'filtered_data.csv'.")
```

 Marwadi University Marwadi Chandarana Group 	Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology	
Subject: Programming With Python (01CT1309)	Aim: Practical based on Data Loading, Storage and File Formats	
Experiment No: 22	Date:	Enrollment No: 92510133025

Save DataFrame to a new JSON file

```
df_json.to_json('new_data.json', orient='records', lines=True)
```

```
print("JSON data saved to 'new_data.json'.")
```

Save DataFrame to a new Excel file

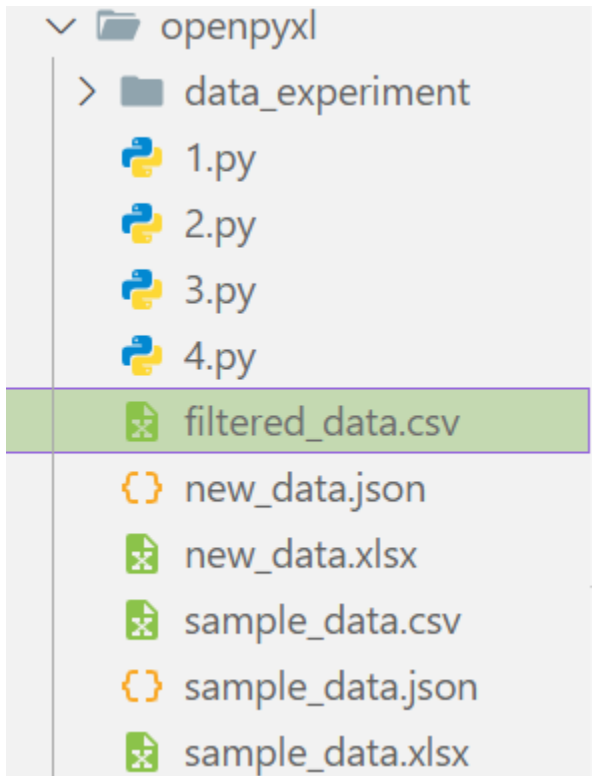

```
df_excel.to_excel('new_data.xlsx', index=False)
```

```
print("Excel data saved to 'new_data.xlsx'.")
```

Output:

A1		fx Name			
	A	B	C	D	E
1	Name	Age	City		
2	Alice	30	New York		
3	Bob	25	Los Angeles		
4					
5					
6

Experiment No: 22	Date: Enrollment No: 92510133025

Post Lab:

Write a code snippet to check the data types of each column in a DataFrame.

Code:

```
import pandas as pd

df_csv = pd.read_csv(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.csv")
df_json = pd.read_json(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.json")
df_excel = pd.read_excel(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.xlsx")
def check_data_types(df, name):
    print(f"\nData Types for {name}:")
    print(df.dtypes)

check_data_types(df_csv, "CSV DataFrame")
check_data_types(df_json, "JSON DataFrame")
check_data_types(df_excel, "Excel DataFrame")
```

 Marwadi University Marwadi Chandarana Group 	Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology	
Subject: Programming With Python (01CT1309)	Aim: Practical based on Data Loading, Storage and File Formats	
Experiment No: 22	Date:	Enrollment No: 92510133025

Output:

```
Data Types for CSV DataFrame:
Name      object
Age       int64
City      object
dtype: object

Data Types for JSON DataFrame:
Name      object
Age       int64
City      object
dtype: object

Data Types for Excel DataFrame:
Name      object
Age       int64
City      object
dtype: object
PS D:\SEM 3 Subjects\Python>
```

Write a code snippet that demonstrates how to fill missing values with the mean of a column.

Code:

```
import pandas as pd
import numpy as np

df_csv = pd.read_csv(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.csv")
df_json = pd.read_json(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.json")
df_excel = pd.read_excel(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.xlsx")

df_csv.loc[1, 'Age'] = np.nan # CSV DataFrame
df_json.loc[1, 'Age'] = np.nan
df_excel.loc[1, 'Age'] = np.nan
```

 Marwadi University Marwadi Chandarana Group 	Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology	
Subject: Programming With Python (01CT1309)	Aim: Practical based on Data Loading, Storage and File Formats	
Experiment No: 22	Date:	Enrollment No: 92510133025

```
def fill_missing_with_mean(df, name):
    df['Age'] = df['Age'].fillna(df['Age'].mean())
    print(f"\n{name} after filling missing 'Age' values with mean:")
    print(df)

fill_missing_with_mean(df_csv, "CSV DataFrame")
fill_missing_with_mean(df_json, "JSON DataFrame")
fill_missing_with_mean(df_excel, "Excel DataFrame")
```

Output:

```
CSV DataFrame after filling missing 'Age' values with mean:
   Name  Age  City
0  Alice  30.0  New York
1   Bob   32.5 Los Angeles
2 Charlie  35.0  Chicago

JSON DataFrame after filling missing 'Age' values with mean:
   Name  Age  City
0 David  28.0 San Francisco
1  Eve   28.0  Seattle

Excel DataFrame after filling missing 'Age' values with mean:
   Name  Age  City
0  Alice  30.00  New York
1   Bob   28.75 Los Angeles
2 Charlie  35.00  Chicago
3  David  28.00 San Francisco
4  Eve   22.00  Seattle
```
